Subject: RE: US Moorings Update (UNCLASSIFIED)

Hello Chris,

I just wanted to let you know that Eva is now the "new Rich", so you can forward your source control related questions to her with a cc to me as she is getting up to speed, and I'll help sort through things. Among other issues, I'm sure Eva will be contacting you soon to status stormwater at the site, and ensure that Moorings is in line with progress made elsewhere under ODEQ oversight. I'll remain the main POC for 404 permit issues that you have at the facility, such as demolition bmps to control in water impact as you noted. We will both look at design components to be checking that work remains consistent with the upcoming harborwide cleanup. I'll also continue to help crosswalk issues for Gasco, as I remain the support agency lead there for the uplands in working with Dana Bayuk at DEQ.

Have you requested/received feedback from fisheries on the bank buffer work? This is a critical component before proceeding. I've cc'd the western fisheries contact for PH, Genevieve Angle.

Thank you for reaching out--I'm sure Eva and perhaps myself will try to do a site visit depending on how schedules line up.

S

Caveats: NONE

Hi Sean,

This email was not successfully delivered to Rich. Is he still with the EPA? If not, do you know who is the POC for the Moorings now?

Thanks,

Chris

Hi Sean/Rich,

We are in the process of removing the decking, crane, and some buildings located on the docks and on the upland at the Moorings. Sean has reviewed the contractor's workplan. Work is progressing and all over-water work will be completed by 31 October 2015, as per the in-water work window. We plan to award another contract within the next month or so to perform the cleanup on the uplands, as described in the action memo. Our goal is to have the contractor on site to plant the vegetative buffer during the fall planting season. Rich, I'll let you know when this is happening in case you want to visit the site. Please coordinate with me on any site visit.

We also have a design team that is working on the replacement dock design. This work will include removal of the existing piles, remediation, mitigation, and construction of the replacement dock. We have some team members in our Seattle district that are helping with the environmental clearances for this work, but Portland district will be sending out letters inquiring about cooperating agency interest. Please provide us the name of the person to send all communications to and those that should be copied (cc'd) so that all who need to know have the information. We look forward to working with you to complete this project.

Thank you,

Chris Budai
